Table of contents

0. Introduction: 1.1
1. General solution to semiconductor devices 1.3
  1.1 Multilayer structures 1.3
    1.1.1 Electrostatics 1.3
    1.1.2 Simplifying multilayer structures 1.3
  1.2 Parameters of bulk semiconductors 1.5
    1.2.1 Temperature dependence of the energy bandgap 1.5
    1.2.2 Doping dependence of the energy bandgap 1.7
    1.2.3 Calculation of carrier densities at thermal equilibrium 1.9
  1.3 Recombination and generation mechanisms 1.14
    1.3.1 Light absorption 1.14
    1.3.2 Band-to-Band recombination 1.16
    1.3.3 Trap assisted recombination 1.17
      a) Bulk recombination 1.17
      b) Surface recombination 1.18
    1.3.4 Auger recombination 1.19
    1.3.5 Recombination in a quantum well 1.20
      a) Band-to-band recombination 1.20
      b) Schockley Hall Read recombination 1.21
2. Heterojunction material systems 2.1
  2.1 The GaAs/AlGaAs material system 2.4
  2.2 Strained GaInAs material 2.9
3. Unipolar devices 3.1
  3.1 The Metal-Semiconductor (M-S) junction 3.1
    3.1.1 Electrostatics of the M-S junction 3.1
    3.1.2 Exact solution of the M-S junction 3.3
    3.1.2 Numeric solution 3.5
      a) Depletion at the Metal-Semiconductor interface 3.7
        α) large potential approximation 3.8
        β) small potential approximation 3.8
      b) Accumulation at the Metal-Semiconductor interface 3.9
    3.1.3 Schottky barrier with an interfacial layer 3.11
    3.1.4 Current across a M-S junction 3.13
      a) Diffusion theory 3.14
      b) Thermionic emission theory 3.15
      c) Tunneling across a barrier. 3.17
  3.2 The n-n+ junction 3.19
    3.2.1 The n-n+ homojunction 3.19
    3.2.2 The n-n+ heterojunction 3.23
      a) Analysis without quantization 3.23
      b) Analysis including quantization 3.24
    3.2.3 Currents across a n+-n heterojunction 3.27
      a) Thermionic emission current across a n+-n heterojunction 3.27
b) Calculation of the Current and quasi-Fermi level throughout a Depletion Region
   3.29  
c) Calculation of the current due to thermionic emission and drift/diffusion
   3.32
3.3 Currents through insulators 3.33  
3.3.1 Fowler-Nordheim tunneling 3.33  
3.3.2 Poole-Frenkel emission 3.34  
3.3.3 Space charge limited current 3.35  
3.3.4 Ballistic Transport in insulators 3.37

4. The p-n junction 4.1

4.1 Electrostatic solution of the p-n homojunction 4.1  
4.1.1. Approximate solution using the full depletion approximation 4.1  
   a) Abrupt p-n junction 4.1  
   b) Linearly graded junction 4.1  
   c) Abrupt p-i-n junction 4.2  
   d) Capacitance of a p-i-n junction diode 4.3  
4.1.2 Exact solution for the p-n diode 4.3  

4.2 Currents in a p-n homojunction 4.5

4.2.1 Ideal diode characteristics 4.5  
   a) "Long" diode case 4.6  
   b) "Short" diode case 4.6  
   c) General cases 4.7  
4.2.2 Recombination in the depletion region 4.7  
   a) Band-to-band recombination 4.8  
   b) Trap-assisted recombination 4.8  
   c) Total diode current 4.9  
4.2.3 High injection 4.9  
4.2.4 Resistive drop 4.10

4.3 Quasi-Fermi levels in a p-n diode 4.10

4.4 The heterojunction p-n diode 4.12  
4.4.1 Band diagram of a heterojunction p-n diode under Flatband conditions 4.12  
4.4.2 Calculation of the contact potential (built-in voltage) 4.12  
4.4.3 Electrostatics 4.13  
   a) Abrupt p-n junction 4.13  
   b) Abrupt P-i-N junction 4.14  
   c) A P-M-N junction with interface charges 4.16  
   d) Quantum well in a p-n junction 4.17

4.5 Currents across a p-n heterojunction 4.22

4.5.1 Ideal diode equation 4.22  
4.5.2 Recombination/generation in the depletion region 4.23  
   a) Band-to-band recombination 4.23  
   b) Schockley-Hall-Read recombination 4.24  
4.5.3 Recombination/generation in a quantum well 4.25  
   a) Band-to-band recombination 4.25  
      α) Low voltage approximation (non-degenerate carrier concentration) 4.26  
      β) High voltage approximation (strongly degenerate) 4.26
b) SHR recombination 4.27

4.5.4 Recombination mechanisms in the quasi-neutral region 4.28

4.5.5 The total diode current 4.28

4.5.6 The graded p-n diode 4.29

a) General discussion of a graded region 4.29

b) Ideal diode current 4.32

5. Photodetectors 5.1

5.1. P-i-N photodiodes 5.2

5.1.1. Responsivity of a P-i-N photodiode 5.5

a) generation of electron hole pairs 5.5

b) Photocurrent due to absorption in the depletion region 5.6

c) Photocurrent due to absorption in the quasi-neutral region 5.6

d) Absorption in the p-contact region 5.7

e) Total responsivity: 5.7

f) Dark current of the photodiode: 5.8

5.1.2 Noise in a photodiode 5.9

a) shot noise sensitivity 5.9

b) Equivalence of shot noise and Johnson noise 5.10

c) Examples. 5.11

d) Noise equivalent Power and ac noise analysis 5.11

α) optical power limited NEP 5.12

β) dark current limited NEP 5.13

5.1.3 Switching of a P-i-n photodiode 5.14

b) Solution in the presence of drift,diffusion and recombination 5.16

c) Harmonic solution 5.17

d) Time response due to carriers generated in the Q.N. region 5.19

e) dynamic range of a photodiode 5.19

5.2 Photoconductors 5.21

5.3 Solar cells 5.22

5.3.1 The solar spectrum: 5.22

5.3.2 Calculation of maximum power 5.23

5.3.3 Conversion efficiency for monochromatic illumination 5.25

5.3.4 Effect of diffusion and recombination in a solar cell 5.25

a) photo current versus voltage 5.25

5.3.5 Spectral response 5.26

5.3.6 Influence of the series resistance 5.26

5.4 Metal-Semiconductor-Metal (MSM) Photodetector 5.27

5.4.1. Responsivity of an MSM detector 5.27

5.4.2 Pulse response of an MSM detector 5.30

5.4.3 Equivalent circuit of an MSM detector. 5.31

6. Light emitting devices 6.1

6.1 The light emitting diode 6.1

6.1.1 Introduction 6.1

6.1.2 Rate equations 6.1

6.1.3 DC solution to the rate equations 6.2

6.1.4 AC solution to the rate equations 6.3
6.1.5 Equivalent circuit of an LED 6.4
6.2 The laser diode 6.5
  6.2.1 Emission, Absorption and modal gain 6.5
  6.2.2 Principle of operation of a laser diode 6.10
  6.2.3 Longitudinal modes in the laser cavity. 6.10
  6.2.4 Waveguide modes 6.11
  6.2.5 The confinement factor 6.12
  6.2.6 The rate equations for a laser diode.
    a) DC solution to the rate equations 6.13
    b) AC solution to the rate equations 6.14
    c) Small signal equivalent circuit 6.15
  6.2.7 Threshold current of multi-quantum well laser 6.16
  6.2.8 Large signal switching of a laser diode 6.17

7. The Bipolar Junction Transistor 7.1
  7.1 Emitter efficiency and current gain 7.1
  7.2 Transit time of a bipolar transistor 7.4
  7.3 Microwave equivalent circuit 7.6
  7.4 Bipolar transistor design 7.7

Appendices A1.1
  A.1 Quantum wells and density of states A1.1
    A.1.1 Density of states A1.1
    A.1.2 An infinite quantum well A1.2
    A.1.3 A finite rectangular well A1.3
    A.1.3 A triangular well A1.4
    A.1.4 Quantum well with an applied electric field A1.5
  A.2 Semiconductor Equations A2.1
  A.3 Physical constants A3.1
  A.4 Material Constants A4.1
  A.5 List of symbols A5.1
  A.6 Exact solution of the MOS capacitor A6.1
    A.6.1 Low frequency capacitance A6.2
    A.6.2 Deep depletion capacitance A6.3
    A.6.3 High frequency capacitance A6.4
    A6.4 The body effect A6.6
  A.7 Some useful optics related issues A7.1
    A.7.1 Transmission and reflection at a dielectric interface A7.1
    A.7.2 Transmission and reflection of a multi-layer dielectric structure A7.3
      A.7.2.1 Example: a Distributed Bragg Reflector (DBR) A7.3
      A.7.2.2 Spreadsheet solution to an arbitrary layer structure A7.4
      A.7.2.3 Reflection and transmission through multiple layers A7.5
    A.7.3 Fabry-Perot cavity A7.7
    A.7.4 Ellipsometer Equations A7.9
    A.7.5 Interference colors of thin transparent films A7.12
A.7.6 Interference microscope with a broad band (white light) source  A7.14

A.8 Micromechanics  A8.1
  A8.1 Cantilevers  A8.1
  A8.2 Beam bending due compressive stress  A8.1
  A8.3 Material parameters  A8.3
  A8.4 Moment of inertia  A8.5
    A8.4.1 Rectangular beam  A8.6
    A8.4.2 I-shaped beam  A8.6
